

## **Learning Journal Template**

**Student Name:** Alireza Amini

**Course:** Software Project Management

**Week 1:** 25 January 2024 – 29 January 2024

**Date:** 29 January 2024

### **Key Concepts Learned:**

In this week in class at first I got to know about the class procedure and after that I try my best to engage with the class in order to get my self to the class point. After class and in this half week I learned about multiple definition which was the same for me in the past. Also I learned more about project management phases and task which should be done during a project in order to have good management which lead to a stunning result for project. Also in my researches about this week exercises I learned about how we can analyse project information to find out as many details as we can about projects.

### **Application in Real Projects:**

Day after day when I got to know more about Software era I become more certain that the management is how important in our real lives. Because in the past we learned that to have a good project we should have a road plan but that was messy for us. So now by learning technically about the management know I know how can I start my project management and what should I consider before everything when I'm planning for my projects even university projects.

### **Peer Interactions:**

Last week I managed a meeting with my team mates in project in order to plan our road for deliverable 1 and we did it soon because lack of time which we have and in that meeting we assign tasks to each person and we put a deadline for it aiming to do our best. Also we arrange another meeting intend to merging our works together. I live this feeling to know more people and figure it out how to communicate with them actually right now I think I have the best teammates for this course because everyone is patinate for the projects.

### **Challenges Faced:**

Because I lost the first week class I'm a little bit behind the class so handling this pressure is challenging for me to do all works together like reading course materials, exercises and project build.

### **Personal development activities:**

This semester I'm trying new way of studying because I used to do more coding and less research in last semester but I this semester one of my reasons for taking this class was reading and writing more, So I'm tend to improve myself.

### **Goals for the Next Week:**

In this week I push my self to reach the class and get prepare for new materials which will discussed at the class.
