Learning Journal Template

Student Name: Alireza Amini

Course: Software Project Management

Week 2: 28 January 2024 – 3 February 2024

Date: 3 February 2024

Key Concepts Learned:
In this week I learned one the most important things for every project in my life, because I believe for every project you should consider some objectives efforts like time and money. I believe every project need to estimate these estimations tend to rather accept or decline a project and more importantly for building the project timelining. Also, I did a little research in programming apple watch applications to may use it in our project.

Reflections on Case Study/course work:
In past week I did a little more research on our team project to analyse the marketplace and trying to find existing problems and some improvements or inventions to do our project and one of the key concepts I realize during my searching was that there are lots of applications for health and wellness but every each of them just cover a part of a person use, after that me and our team mates should think about how many of them are really useful for the user.

Collaborative Learning:
This week was outstanding for me because I was busy, and my teammates show me a good support during this week which shows me their concerns about me and the project meanwhile we try our best to gathering data about the topic. Currently we have bunch of ideas which we plan to have a brainstorming and considering aspects of our ideas and finalize them.

Further Research/Readings:
I found why which I shared with my teammates and to some of my friends in other groups for searching and analysing the marketplace and that's the way I did and in will do next week which is using Play Store (Android) and App Store (iOS) application data. That is a good summary of what we'll need to know about existing applications and individual needs.

Adjustments to Goals:
I am happy now I reached my past week goals which was learning past materials for the time I was absent, although it was challenging for me because now, we are in first couple weeks, and it causes a bad week routine, but I will do my best to arrange my works.

Goals for the next week:
In this week me and my teammates will finalize the marketplace analyse and project initiation documents and we start our next phase. Also, I will try to read more about chapters and be more prepared for classes.
